# GRDM Installation Guide

November 2025

## Introduction

This installation guide refers to the installation files available at the following link or the QR code on the main page.

[www.waterscience.co.za/grdm.html](http://www.waterscience.co.za/grdm.html)

### Important Note:

- The installation will require administrative rights if you choose the automatic installer, so if you are not the administrator on your computer arrange with your IT department to assist with installation.
- A self-extracting zip installer is also available that should not require administrative access, but this installer does not place an icon on the desktop or add it to the start menu.

## System Requirements

It is recommended to run the software on a computer with the following specifications:

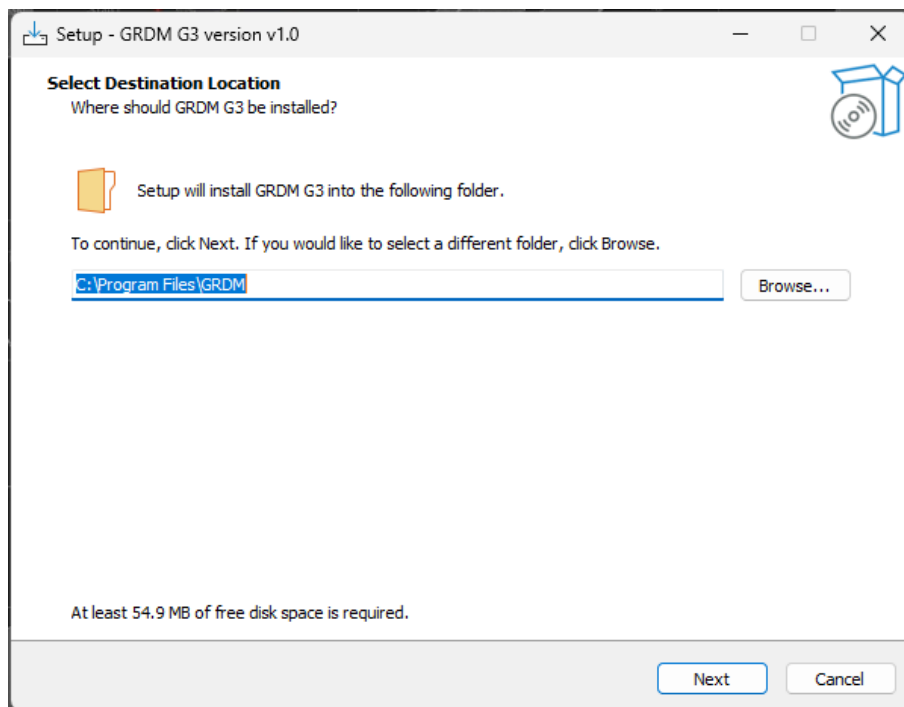

- Windows 10 (64bit or 32bit) or later
- 8Gb RAM or more

### Important Note:

- Although not recommended, the software is likely to run on computers with older Windows versions, but has not been tested in these environments.

## Installation (Automatic Installation)

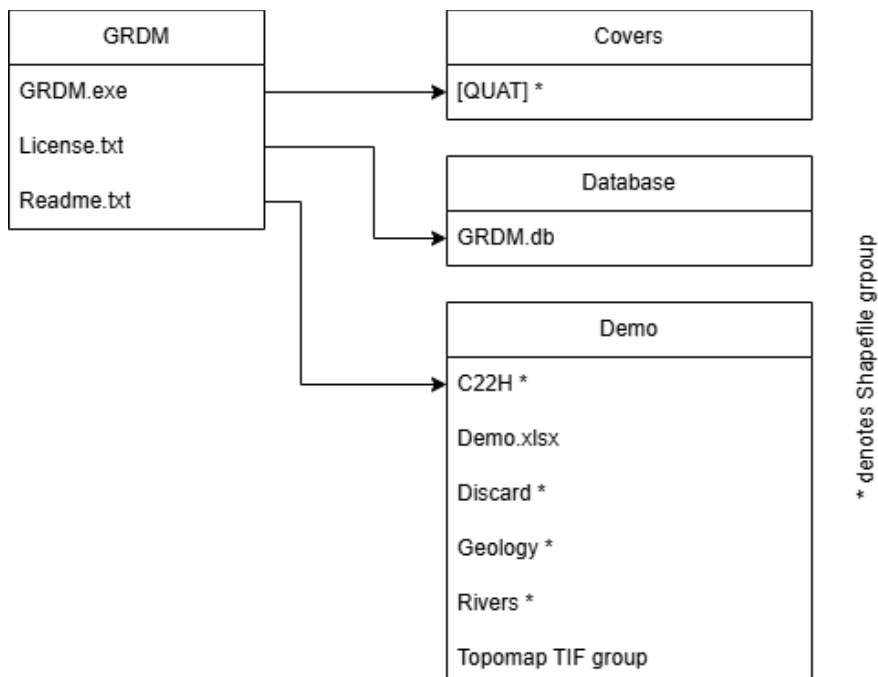

- Download the install file **GRDM Install (64bit & 32bit)** from the website and run the installation. The installer will automatically detect if you have a 64bit or 32bit operating system and install the appropriate version of the software.
- It is recommended to select default installation folder as shown below. Please note the target folder will be different depending on the operating system version you are running.

- On completion, the following icon associated with the software will appear on the desktop:

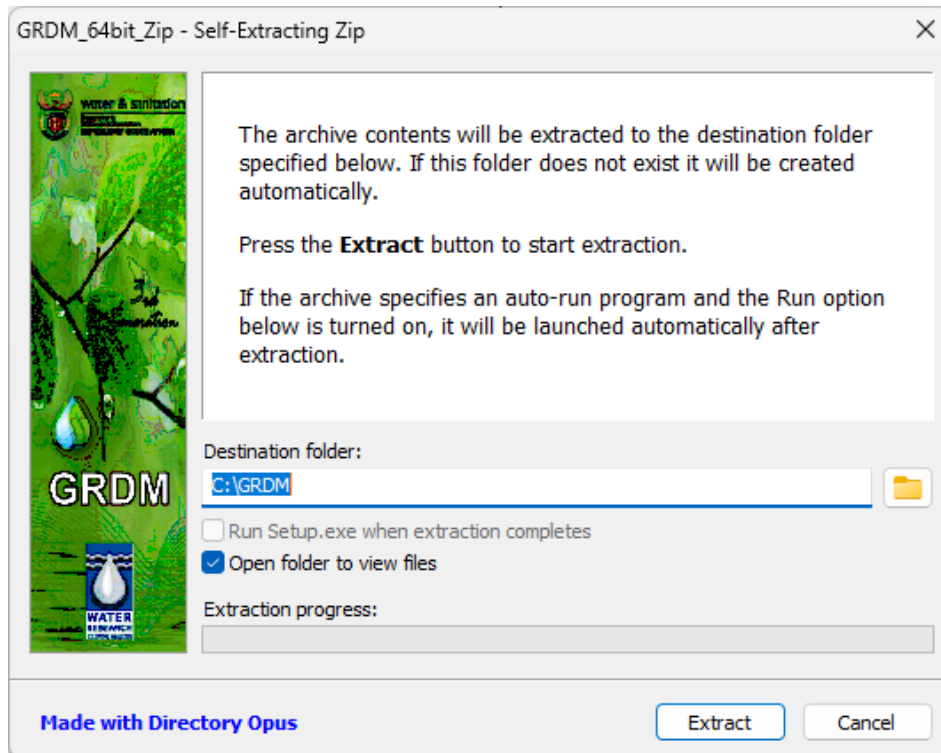

- Finally, the directory structure and files deployed during the installation are presented in the image below:

## Installation (Zip Installation)

- Download either the **GRDM 64bit Zip** or **GRDM 32bit Zip** from the website and run the installation. Note a 32bit application will run on both a 64bit and 32bit operating system, but a 64bit application will only run on a 64bit operating system.
- It is recommended to select default installation folder as shown below.

- If an application icon is desired, please navigate to the installation folder and right-click on GRDM.exe and select **Desktop (create shortcut)**.
- Finally, the directory structure and files deployed during the installation are presented in the image below:
